

Wireline 360 Degree Digital Camera

The MSI-360 Digital Camera is the first of its kind in our industry!

It is the first fully digital camera that works on up to 2000 meters (6562 ft) of standard single, coaxial, or multi-conductor wireline. It displays high-resolution downhole and side-view video on the surface in real-time. The onsite operator and the customer can see the real-time video displayed in an internet browser on their personal phones, tablets, or laptops using the control unit's built-in Wi-Fi or ethernet connections.

360 DEGREE CAMERA SPECIFICATIONS
